

Date	13 November 2022
Team ID	PNT2022TMID51072
Project Name	Virtual Eye - Life Guard for Swimming Pools to Detect Active Drowning
Maximum Marks	8 Marks

Running an application:

1. Switch to the z/OS Projects perspective.

- a. Create a launch configuration with certain input or environment settings for the executable file.
- b. On the workbench toolbar, click the **Run** icon and select **Run**.
- c. In the configurations list, click **Compiled Application**, then click the **New launch configuration** icon.
- d. Give the launch configuration a name in the Name field. This option is now available under the Run With Configuration menu. Select a name that you may use to refer to the application, input parameters, and values of the environment variables defined in the launch configuration
 - On the **Main** tab, define the **Project**, **Program name**, and **Program parameters** in the respective fields.
 - On the **System Environment** tab, specify values for environment variables that the executable file queries at runtime.

- On the **Common** tab, define the type of launch configuration and the perspective you want to use for each launch mode.

2. Click **Apply** and **Close**.

3. Run the program.

- . In the Projects view, find the executable file that you want to run.
 - a. Right-click the executable file and select **Run With Configuration** > (launch configuration name you defined previously).
